Abuts: Same as:  
 Abutted by: 29062  
 29057 and pos. 32929  
 Bonded into: 32966, 29062 (32943), [32944]  
 Contiguous with: 32966

Discussion and interpretation:  
 This is E-W aligned mudbrick wall → thought to be continuation of the settlement wall, but there is no actual link between the two, other than their alignment. It constitutes the western part of the northern entrance and its eastern counterpart is 32966 (entrance later blocked off by 29062).  
 It is covered with thick marl plaster 29060 which tipped down on the northern side of the wall to create a floor surface 32935.  
 This wall has a construction cut [32944] filled with packing material (crushed limestone + silt) (32943); it has footing, which consists of 1 course of bricks laid on their beds in a system of stretchers. This footing obscures the base of the construction cut. The wall appears to be leaning to the south, pos. from the pressure of deposits built up against its northern elevation.

Remember: do not just draw the architectural feature in isolation. Show how it relates to surrounding features and include details of surface treatments, repairs/modifications/damage, bonding material(s), and associated cuts. Annotate all aspects of the feature or use a Drawing Key. Measurements must be included for all aspects of the feature and surrounding features.

**Sketch Plan** - Include grid co-ordinates, North arrow, and elevations.

(for levels see #2009-350-351)  
 plus #  
 and #2011-138

**Profile Sketch** - State direction the elevation of the feature being drawn is facing e.g. 'West Facing Elevation of Feature .... If feature was drawn in section then include the grid co-ordinates and elevations.
