Your interpretation: midden deposit	Internal	External	Structural	Other (specify)
Your discussion:				
<p>Lense of pottery shards and angular limestone crush (ranging from pebbles to cobbles) in a matrix of silty sand. This sand is poorly sorted particle size and heavily mottled (mottles ranging in size from 6mm to 3cm). Approximately 50% of the inclusions are pottery shards. Deposit is truncated to the North by a backfill mound (in terms of visibility).</p>
