Type of feature: Pottery Rich Fill				
Stratigraphic Matrix				
Your interpretation: <u>Internal</u> External Structural Other (specify)				
Your discussion: 29591 is a pottery rich deposit which contains silt and ash. It occupies space between two limestone walls and could have been some sort of storage unit or simply a garbage fill. There is a mudbrick wall to the north but phasing has not clearly been established between these features as of yet. It is within room 189 as designated in the Salim Hassan report.
