

GIZA PLATEAU MAPPING PROJECT

Grid Square(s) 101.V26	Area KKT	Context Type deposit	Central Coords	Context 29754																														
DEPOSIT				CUT																														
1. Compaction	1. loose loose			1. Shape in plan																														
2. Colour	2. Yellowish white			2. Corners																														
3. Composition/Particle Size (Over 10%)	3. Sand with limestone crush ranging in particle size from gravel to cobble			3. Dimension/Depth																														
4. Inclusions (Under 10%) occa / mod / freq	4. Grey to black silt and mottle the boundary of this feature			4. Break of slope-top																														
5. Thickness and extent	5. Unknown as this feature only touches the extreme west edge of this grid square and is obscured under a fill material			5. Sides																														
6. Top and bottom boundaries	6. Visible area 3.60m x 1.04m			6. Break of slope-base																														
7. Other comments	7. 6. 1.1m x 1.1m 1.1m x 1.1m 1.1m x 1.1m			7. Base																														
8. Method and conditions	8. Clear			8. Orientation																														
	9. 2) -			9. Inclination of axis																														
	10. 3) 2ms dry hot & bright			10. Truncated (if known)																														
Type of feature: Stratigraphic Matrix

This context is			29754																															
		29755	29753																															
Your interpretation: Limestone Crush deposit w/ inclusions	Internal	External	Structural	Other (specify)																														
Your discussion: <p>This feature is the edge of a limestone crush deposit, the latest in at least three associated limestone crush deposits, this being the only one to have inclusions of virtually any kind. in the form of black and grey mottles scattered at the feature boundary \approx 2-6cm in diameter, which appear to be ash/burst stains.</p> <div style="float: right; text-align: right;"> Placement in square 101.V26 </div>
