DEPOSIT			CUT																																		
1. Compaction	(1) Loose			1. Shape in plan																																	
2. Colour	(2) 10GR 5/4 yellowish brown			2. Corners																																	
3. Composition/Particle Size (Over 10%)	(3) 40-50% limestone cobble; 50-60% 30% mud, 20% sand			3. Dimension/Depth																																	
4. Inclusions (Under 10%) occa / mod / freq	(4) Charcoal (occa), ceramic (occa)			4. Break of slope-top																																	
5. Thickness and extent	(5) thickness: 40cm extant: ~90cm N/S, ~70cm E/W			5. Sides																																	
6. Top and bottom boundaries	(6) clear to irregular			6. Break of slope-base																																	
7. Other comments	(7) Some stones were left at the bottom of the cut to prevent it from collapsing.			7. Base																																	
8. Method and conditions	(8) Brushes, trowel, mattock			8. Orientation																																	
	(5) cont'd... Deposit is "stepped" being ⁵⁸ 40 cm deep at the thickest point on the E boundary boundary. See plans sketch for detailed drawing of "step".			9. Inclination of axis																																	
	(6) cont'd... the shallow "step" on the W boundary is clear & runs ~20cm E; the deeper "step" continues to the E boundary and is irregular.			10. Truncated (if known)																																	
				11. Fill/#s																																	
				12. Other comments Draw profile overleaf

Your discussion:																																					
<p>The bottom 5 stones on the S/E corner of the deposit were left in the trench so that it would not destabilize the rest of the deposit.</p>																																					
				Placement in square																																	
<p>Fill of another burial but no burial number assigned. Skeleton (29965), cut [29962]. The skeleton was recorded on a burial form a copy of which is in the KKT/MVT burial archive binder in Giza. DCJ 21 SEPT 2013.</p>				0
