Your interpretation:

Internal External Structural Other (specify)

Your discussion: Cut that bisects the Menkaure road/ramp from the field store house and the KKT town. Purpose is unknown. Also cuts through the E/W sides of Basin. Many fills consist primarily of limestone gravels, sands, and mud brick collapse deposits with a high level of anthropogenic material. Possibly the fills are a mason's dump? fills consist of a mix of OK material. In 2008, the number [30028] was given to the south side of the cut. And numbers [29013] and [30304] were given to the 2 visible levels of the north side of the cut in 101 R24, 25, 26. However in 2009, the number [30028] was applied to all levels of the N/S sides of the cut as the excavations showed that fills between them were the same. In 101 Q23, 24 + R24, the west of the cut bisected building face of the Menkaure ramp/road on the south, and areas in front of the fields here houses. Also of note in the section of [30028] in 101 R25 + 26 are 2 horizontal white lines seen in TRQ photos and 2009-72 and 2009-74. This white line may link stratigraphically to a similar line on the south side, Menkaure Ramp/road. over 3.3 meters, the top of the cut decreases about 3 meters.
