Your discussion:

This context is a mud floor surface; this is not poorly preserved, though clearly visible in section (see section drawing # 2009-63) and going under wall 30838. It is associated with mud plaster (32965) on top of limestone (32414), which is covering mud plaster (32415) on top bedding of the N-entrance 29062. It rests on a thin ~~bed~~ silty layer → either a bedding or a truncate horizon (surface in its own right)
