Your discussion:				
<p>This deposit is a thin layer of silt below west floor surface 3241. It is thin and poorly preserved in place, though clearly visible in section (see section drawing #2009-63)</p> <p>It could be interpreted either as a make-up layer for 3241 or a truncation horizon, a sort of floor surface in its own right.</p> <p>* First observed in section (W-facing; slot B) in 2009</p> <p>* appears to be filling the indentation of 3082 33026</p>
