Your interpretation:	Internal	<input checked="" type="radio"/> External	Structural	Other (specify)																														
Your discussion:	Deposit of compacted silty sand with freq limestone and mud inclusions; Truncated by construction cut [32940]. Appears to occur as result of natural processes, though there is a possibility that it could be a sort of make-up deposit, either associated with early stages of the structure, before blocking 29062 was raised, or with other features to the north of the structure. Could it be associated with floor 32935 which rests on top of it? Does not appear to be typical make-up for a floor.
