

GIZA PLATEAU MAPPING PROJECT

Grid Square(s) 201. H26/i26	Area KKE-E	Context Type DEPOSIT	Central Coords	Context 32949																														
DEPOSIT				CUT																														
1. Compaction	1. medium to loose			1. Shape in plan																														
2. Colour	2. light greyish brown			2. Corners																														
3. Composition/Particle Size (Over 10%)	3. silty sand			3. Dimension/Depth																														
4. Inclusions (Under 10%) occa / mod / freq	4. freq. small fragments of limestone freq mod. with fragments,			4. Break of slope-top																														
5. Thickness and extent	5. N-S : c. 0.40m E-W : c. 1.40m max thickness: 0.15m			5. Sides																														
6. Top and bottom boundaries				6. Break of slope-base																														
7. Other comments				7. Base																														
8. Method and conditions				8. Orientation																														
				9. Inclination of axis																														
				10. Truncated (if known)																														
				11. Fill #s																														
				12. Other comments																														
				Draw profile overleaf																														
6. top: defused; bottom: clear where it rests on top of the bedrock, more defused where it rests on top of fill (32954)																																		
Type of feature: blue-rich ? not fully excavated

Your interpretation:	Internal	External	Structural	Other (specify)																														
Your discussion:																																		
<p>This deposit is sand mixed with frequent blue inclusions and scale of fossils; it is truncated by [32940] construction cut for well [29062] and rests on top of fill of quarry [32955] and bedrock 32952;</p> <p>It is most likely to be associated with natural processes; accumulation of eroded materials filling the natural undulations of the bedrock.</p> <p>*it is not very clear if this deposit is also cut by quarry [32951]; I'd rather think not.</p>
