

Date (dd/mm/yy): 30/15/08 EU: Vigla-Eu 08-2 SU: 5002

Description: ~~to~~ ~~and~~ ~~5~~ ~~SU~~ ~~5002~~ is the ~~the~~ unit just below surface level, which is still in the plow zone. In this SU, we have found a decent amount of substances with many inclusions in it. For the most part, we think this is mortar, but since ~~it~~ ^{we are} generally not able to diagnose where it comes from and since there is enough to be too much to keep, we only kept the first few examples and decided to note that there were more found here.

Additionally, we have sifters with very fine mesh, so besides taking a while to sift, we tend to find everything, including very fine small artifacts.

Also, the previous recorder, Dallas, was ~~needed~~ taken to do another job, so I have been assigned to finish this record.

We dug until we hit a new soil consistency, soil color is the same. The base, which is the top of SU 5003, seems to have some type of plow furrows, which are easily visible.

Fragile walls are making it difficult to square off the edges.

We also found one feature that appears to be a white rock that is 23cm x 19cm in dimension looking from above. The location of this rock can be seen in the plan view for this SU.

Date (dd/mm/yy): 02/01/08

EU: 08-1

SU: 5003

Area: Vigla

Supervisor: BO

Recorder: JMF

Summary: The change in soil consistency appears to differ from 5002 because of the change in the direction of the flow.

Chronology: (to be filled out by RSM or MH)
