5101										

Soil description

Munsell (wet): None taken

Stoniness (%): 10%

Soil type: Silty loam

Dominant clast size: Gravel/pebble

Consolidation: Fine-grained soft

Features

Procedure

Dry sieve Water sieve If water sieve, # of bags:

Finds (# of bags)

Ceramic 1 Stone Bone Metal Organic Plaster Other 1 ^(shell)

Date (dd/mm/yy): 21/5/12

EU: 14

SU: 5101

Description:

Unit consists of a 3-5 cm light scraggy layer included several sherds, plants, and debris. The layer is directly on top of the plow zone. SU 5101 closed on 21/5/12.

Notes for trench:

1) Trench not exactly aligned to true north, just a little off because of total station problems in the beginning.

2) ALL coordinates have the following prefix:

N/S = 38714

E/W = 5644

Elevations: (bottom)

NW = 55.55, NE = 55.53, SW = 55.52, SE = 55.55, Center = 55.55

EU 14 opened over what appears to be an E/W oriented wall on the geophysical results. SU 5101 removed to reach the plow zone, which is identifiable by E/W oriented plow furrows.
