Description: Area of more ~~comp~~ somewhat looser (cf. to rest of trench at this level) silty, banded by rocks on 2 sides and scarp wall on other 2 sides - Made this a separate SU from rest of trench.

Uncovered rounded gypsum fragment in SW corner of SU. NS wall revealed and defined. Large block^{cut} near gypsum.

This soil is different than the soil immediately west (5208) of N-S stave that cuts across the SW extension. Its looseness & softness suggests that it is a later (more recent) digging into the soil matrix of 5208. This is a hypothesis, anyway.

East side of trench.
