**Soil description**

Munsell (wet): 10YR 6/4  
 Soil type: Silty clay loam  
 Consolidation: fine grained loose  
 Stoniness: 70 %  
 Dominant clast size: pebble cobble

Maximum top elevation: 7.66  
 Minimum bottom elevation: 7.45  
 (\*Indicate elevations on SU plan)  
 Slope: 5% N-S

Description: SU 7023 is directly beneath  
 SU 7021 is new extension of excavated area  
 to the south of 149.5 section line. We are  
 excavating architectural fall debris from  
 south of presumed height of wall 7011 f1  
 and south of <sup>east</sup> wall 7011 f2 and door jams  
 7026 f1. This SU is consistent with  
 other architectural fall debris contexts  
 excavated this season in area to the west  
 (7015 and to some extent the north 7018, 7020)  
 It contains large stones (pebble-cobble), mortar and  
 tile within very soft loose light brown tan  
 soil. Few subjects other than construction  
 material.
