Soil description

Munsell (wet): 10YR 4/4 dark yellowish brown
 Soil type: sandy clay loam
 Consolidation: soft-lim
 Stoniness: 10 %
 Dominant clast size: gravel

Maximum top elevation: W: 777
 Minimum bottom elevation: 7.62

SU: 7106

Description:

7106 is directly below 7105 in the trench. Its soil & context are ~~identical~~ identical w/ 7105. We have turned up several more stones & illustrated these on the plan view. The ceramics remain almost entirely tile frags.

The SU is closed so that 7108 can be created out of 7106 & 7107, once they reach a common elevation (for the sake of clarity)

17/6 Addendum: while 7106 & 7107 we separate SUs in the trench, once they reach a common bottom elevation, I thought it best to close them & create one larger SU out of the 2 - 7108. This way, we would only have one SU open rather than 2. Besides, SU 7107 was a surface clarity, technically, & so had to be closed. Once 7106 was level w/ it, we closed 7106, too. This was done primarily for logistical reason (soil & context were the same). Hope this helps.
