**Soil description**

Munsell (wet): 10YR 4/4 dark yellowish brown

Soil type: sandy clay loam

Consolidation: f1/m

Stoniness: 10 %

Dominant clast size: gravel

Maximum top elevation: 7.50

Minimum bottom elevation: 7.26

(\*Indicate elevations on SU plan)

Slope: level

**Features**

- f1. Molded gypsum window screen (?)
- f2. addendum ↳ This, in fact, is a re-used pier, bonded to the wall (7112 f1)
- f3.
- f4.
- f5.

Date (dd/mm/yy): 3, 6, 09 EU: 13 SU: 7110

Description: SU 7110 is under the SW corner of SU 7108, defined by its soil color, but also the large concentration of mortar to the north, which marks southern boundary of SU 7111.

It seems that this area lacks the high concentration of packed debris noted in 7109 & 7111. This is clarified once we come down on 7110 f1. Once articulated, it measure 54 cm x 44 cm and appears to be a large molded gypsum piece. Sarah L interprets it as possibly an overturned window screen, plastered over when the annex was modified for its second phase.

† gypsum incl.  
~~all~~ common in vicinity, too (4-6cm)

o- Pesting on its northern side is a gypsum plate (revetment?)

We will have to excavate further to advance our understanding of this feature & its surroundings. But since it takes up most of the SU, can explain the lack of debris as found in 7109 & 7111. This is not to say there is no debris - the quantity is simply

lower but we have recovered tile & mortar still, & sandstone frags (8-12cm)

7110 is closed arbitrarily, per excavation manual guideline.

16/6 Addendum 7110 f1: This is a reused pier, bonded to 7112 f1.
