Date (dd/mm/yy): 8, 6, 09 EU: 13 SU: 7114

Description: This SU again has sandy soil, yellowish brown & is quite loose (though slightly sandier & grittier than 7113). Context material consists of more debris: frags of annex floor, lots of mortar/plaster, some small sandstone (4-6cm), very little tile, & some glass. SU closed when we came down on an obvious floor.

7114f1, floor: The floor is well-preserved across the whole SU, w/ only 2 exceptions. One is a small area (3x3cm), perhaps disturbed by vegetation some, while the other is in the NE most corner of the SU where a pile of large rocks might be the culprit (40-15cm). The floor is simple tamped dirt w/ a lime wash poured atop it. It is quite ~~firm~~ firm & there is debris context material visible in it (ceramics, mortar/plaster). The floor extends to both 7112f1 & the south wall of the annex, indicating quite clearly that both walls were in use in some capacity when this floor & its space were in use. Neither wall cuts this floor - this is very clear - the floor rather runs up, onto the walls.

FS 7114-1001: well-preserved amphora rim & neck; Late Roman (?); E 409.1 N 168.8; EL: 6.79
