Date (dd/mm/yy): 11 / 6 / 09 EU: 13 SU: 7120

Description: This SU continues into the floor fill & encounters the same soil & context material as 7118 - loose, dark yellow brown, silty clay, w/ isolated pockets of clay (a nice diagnostic characteristic). The context material has low mortar content while ceramics are now more common - typical of this fill.

We close this SU when we come down of concentrated stones through, except in NW & SW, which rep. su 7121 (NW) & su 7119 (SW). We have already dug 7119, & will dig NW corner as 7121.

7120F1: Consists of packed, concentrated stones of 10-15cm range, which may be a wall of some kind. It forms a T shape, though (see drawing). More etc. will be needed to assess this feature.
