*unit:* --    *phase:* --    *stage:* --    *stratum:*    *PoM:*

*summary:*

**Opened:** Beginning of season, first locus below the plastic. some cleaning of baulks and scraping the surface.

**Limits (N)** W9211

(S) baulk below W9066

(E) W9140

(W) baulk

**Closed:** end of cleaning

**Matrix:** gray and brown soils mixed with mudbricks material

**Relations:** this locus was the beginning of the season, just below the plastic from last year. it was defined on the same area of the last locus from last year. The plastic seems to keep the area relatively in good shape so this locus can be treated together with L04G-004, but we should remember that some finds could come from cleaning the baulks.

**Importance:** Could be disturbed from the baulks
