unit: -- phase: -- stage: -- stratum: PoM:

summary:

Opened: begining of season cleaning the surface below plastics and scraping the baulks

Limits (N) baulk

(S) baulk below W9400

(E) baulk

(W) L04G-002

Closed: end of cleaning

Matrix: Brown and gray matrix mixed with some fallen bricks and very few shards. A few sand pockets were observed between the bricks, it looks like animal's holes.

Relations: At the end of last year the area of this locus together with L04G-002 was separated into two loci, since they found a surface above this locus. both loci were not leveled and the surface has a lot of hils and valleys. This locus was defined as acontinuation from last year, but after a few cm and leveling the neighbor locus L04G-002, we couldn't find any difference between them, so we leveled all the area and defined a new locus L04G-007. this locus is sealed by the surface in L18918 and could be treated like L04G-005 since the plastics keep it in good shape.

Importance: sealed, but some disturbness could be from the baulks cleaning.
