summary:

Opened: wereached surface of white layer, the floor which goes with the complete vessels of L04G0-006.

Limits (N) W04G0-008

(S) area which was excavated in the past

(E) baulk

(W) baulk

Closed: End of season

Matrix: brown soil with mixture of stones in medium size, together with two special stones.

Relations: Below L04G-006 and Sloan's floor.

The floor which is basically Sloan's floor, covered only part of the locus. Since it is a very narrow locus we could not separate the sealed area from the non sealed.

This could be a fill below the floor and we have found some interesting stones in it. One is a very heavy material with 5% Iron (20 times more than usual stones) and not far from it a flat polished stone just below the floor.

Beside that we can not say any more about the relations of this locus, since it was found in the baulk with not to much place to excavate.

Importance:
