Summary \_\_\_\_\_

Opened: To excavate material around edge of pit L9251 and remove erosional material down to level of stratified deposits.

- Limits (N) Bounded by W9211 to the North.  
 (S) Bounded by L18040 to the South.  
 (E) Bounded by W9275 to the East.  
 (W) Bounded by W9140 to the West.

Closed: Came down on F18021 in South half of Locus; Opened 18032 in north half of (18021) where there was no floor, 18067 in South half below floor (= F18040)

Matrix: Sandy dry brown mudbrick material containing few sherds, some bone and shell.

Relations: L18021 is covered by the previously excavated L9332 and unexcavated material below pit L9680, which eroded during several seasons of nonexcavation to reveal the eastern extension of W9211 the northern limit of W9275 and the North east corner of L18021. The center of L18021 is cut by the previously excavated L9251. L18021 reaches W9211 to the North, W9275 to the East, W9140 to the West, and is the continuation of horizontal twilight zone 18040 to the South. The north half of L18021 covers L18032, which is the continuation of L18021. The South half of L18021 covers the northern portion of L18067 and seals it with F18021, which extends to seal most of L18067. F18021 is cut by pit L9251, reaches W9262, was not found to reach W9140 (could not be traced in this direction) and reaches the stone sole of W9275 at a 90° angle. It is possible that W9275 cuts F18021 also. F18021 continued under all of 18040 to the south and the east and north sections below W9886/

7/02 likely = L9836

Additional Observations/Value: Horizontal twilight zone down to floor reaching Phase 7 wall. Low to medium Value.
