Summary

Opened: To remove balk between AG33 and AH33

Limits (N) W9282
 (S) W9278
 (E) L9973 and L9972 and L9976
 (W) L9657

Closed: Technical closure to join L9972 to L18074. The new locus became L18076

Matrix: Light brown to reddish brown sand. A high volume of pottery was removed as well as bone and 2 worked stones. The soil was lightly packed and was easily removed. There was no evidence of mudbrick or stones of any size. The matrix of L9973 and L9972 and L9657 are in accordance with L18074

Relations: L18074 is a balk between AG33 and AH33. *
 To the North L18074 is cut by W9282
 To the South L18074 is cut by W9278
 To the West L18074 continues into 9657
 To the East L18074 continues into L9973 and L9972 and L9976
 In the North L18074 is cut by W9282. In the South L18074 is cut by W9278. In the East L18074 continues into L9972, L9973 and L9976. This is seen through the similarities in matrix and in elevation. In the West L18074 continues into L9657 which is evident throughout the soil matrix, pottery content and elevation

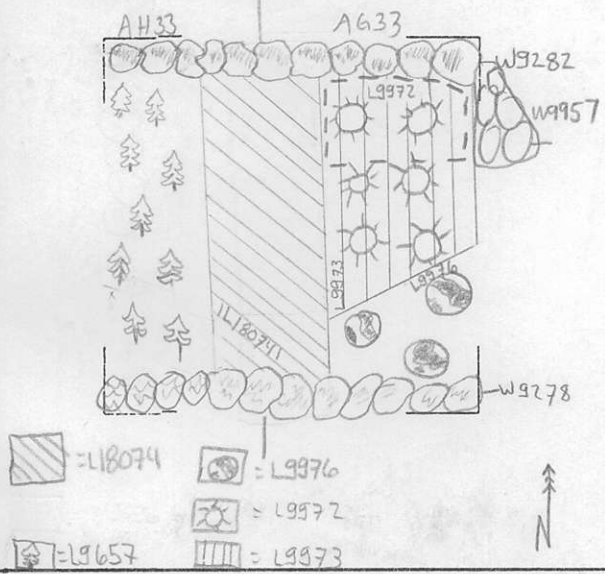

* The balk was "knocked down" to ca. the level of Cheryl's high floor (=F9305) and the balk was then excavated stratigraphically to complete the excavation of the assemblage from Cheryl's Famous Floor.

Additional Observations/Value: The Value of this locus is high as it shows the definite link between Cheryl's famous floor of highly concentrated pottery sherds in AH33 and AG33
