Unit	Phase	Stage	Stratum	PoM
------	-------	-------	---------	-----

Summary

Opened: Excavated L9025 (Roman drain) Fill below became L18200

Limits (N) eroded balk  
 (S) eroded balk  
 (E) eroded balk  
 (W) L18205 and balk

Closed: Came down on Floor that may have reached the upper stages of bin L9882. Changed the area north of L9882 to L18207

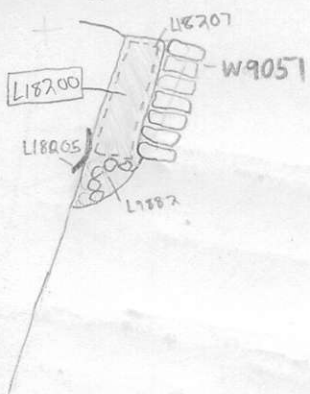

Matrix: Loose medium brown soil with small clods and a substantial amount of pottery.

Relations: L9025 seals L18200. On the east L18200 is with L9051 and continues on the east, on the north also cuts the drain. On the south it reaches the top of L18200. L18200 reaches by tabun L18205 and continues into the balk on the west. L18200 covers but does not seal L9882 and L18207 below. L18200 reaches the upper stages of L1882. Tabun L18205 either cuts or was built on L18205 but the relationship is unclear.  
 \* Tabun 18205 was revealed in the balk below the east wall of drain L9025 after L18200/ was already excavated
