Summary

Opened: While excavating L18217, came down on W18229. Area to the north became L18243.

Limits (N) Bulk under W9262

(S) W18229

(E) Bulk

(W) L18273

Closed: end of season reached; not closed

Matrix: Loose mud brick debris with some sandy patches. The remains of 1-2 cow skulls and 1-2 pig skulls as well as many other bones is of significance. These bones were nearly completely covered by 60x70cm round and flat Kulkar stone.

Relations: Above: L18217 covers but does not seal L18243.

North: L18243 continues into the bulk under W9262.

South: L18243 reaches W18229.

East: L18243 continues into the bulk.

West: L18243 reaches L18273 installation.

Below: L18243 comes down on partial floor. No loci below.

L18243 is very fragmentary and reaches L18273. It also appears to dive down and may go under the (skeletal) material. However, we were not able to finish excavating this floor because the end of season was reached.

* JRZ 02 Floor noted here may be greyish material at bottom of pit 18347. Difficult call photos + sections indecisive?

Add Photos: 166549-851

Additional Observations/Value: High Value. Large bone deposit.
