Summary _____

Opened: START OF THE SEASON WE WENT BELOW L18350

Limits (N) BALK
 (S) BALK UNDERNEATH W18999
 (E) F18373
 (W) F18403

Closed: WE CAME DOWN ON F18365

Matrix: GREY TO BROWN LOOSE SANDY SOIL, DOWN TO A LAYER OF RED SOIL WITH KURKAR INCLUSIONS ABOVE THE FLOOR. THE FLOOR CONSISTS OUT OF TIGHTLY PACKED LAYERS OF JUST CHALKY-ASHY MATERIAL (3-4 CMS THICK). Seems to be 1-3 resurfacings.

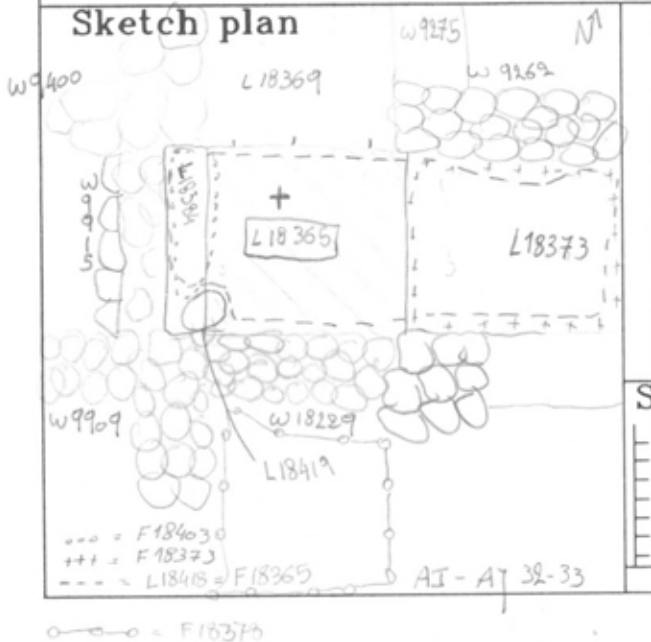

Relations: ABOVE: L18365 is covered by L18350 but not sealed by it
 NORTH: L18365 CONTINUES INTO THE BALK
 SOUTH: IT IS VERY CLEAR NOW THAT W18999 (PART WEST OF STONE PIER) IS FLOATING ON ITS NORTHSIDE. L18365 CONTINUES IN THE BALK UNDERNEATH. ACCORDING TO ELEVATIONS, F18365 MAY VERY WELL EQUAL F18378 (1140-1128) AND BOTH WERE VERY WELL TRACEABLE. F18365 CONTINUES BELOW W18229 AS F18421.
 EAST: F18365 IS A CONTINUATION OF F18373 HOWEVER, THIS FLOOR IS VISIBLE IN THE NORTH SECTION AS A LINE ABOVE F18365. F18365 SOIL IS AN EARLIER RESURFACING OF THE FLOOR SINCE F18365 MAKES A PHYSICAL CONNECTION IN THE EAST. F18373 EQUALS F18365. I.E. F18365 AND F18373 ARE THE SAME FLOOR, BUT *
 WEST: L18365 CONTINUES INTO L18384. F18365 CONTINUES INTO F18403 AND EQUALS IT. FROM THE INFORMATION IN THE SECTION AND BECAUSE OF ALL REACHES, WE CAN CONCLUDE THAT F18373 = F18403 = F18365
 BELOW: L18365 SEALS L18418. IN THE SW CORNER NO FLOOR WAS FOUND AND RED SOIL SEEMS TO CUT BOTH F18403 AND F18365. THIS HAS BEEN CALLED L18419
 IN THE BULK N OF F18373 IT WAS CLEAR THAT A LATER RESURFACING OF F18373 FOLLOWED THE EARLIER SURFACE OF F18373 WHICH DIRECTLY CONTINUES AS F18365

Additional Observations/Value: Isra would only gruffly report that photo #s for this locus/floor were between 185259-185277. MEDIUM VALUE: OLDEST PHASE II FLOOR?
