unit: Hor. 3 *phase:* 11b *stage:* xi *stratum:* *PoM:*
summary:

Opened: Shell floor bedding continuous from S of wall W18463, W of the line of wall W18471, and N of L18475, with an extension to the E south of W18471.

Limits (N) W18463

(S) W18475

(E) Drop in elevation from 1999 excavation.

(W) Bulk under wall W9065.

Closed: Shells fully exposed over entire area.

Matrix: Compact reddish-brown matrix.

Relations: L18470 = L18393 (1999) = L18306 (1998?) = L18448 = L18462 = 18466 = L18451. See drawing for L18462.

F18470 installation is sealed by reddish-brown matrix L18470 et. al.

GHOST ROBBER TRENCH (L18505) is inferred from the depression continuing the N-S line to the S of W18471 plus the multiple surfaces excavated to the E of wall W18471 (L18472, L18497) Stop along the presumed RT line. A second ghost robber trench (L18529) to the E of the 2 stones W18528 was similarly detected when the shell bedding was removed revealing the contours of an original foundation trench.

- This matrix covering the floor shell bedding provided no indication of the function of F18470.
- Later walls W9915 and W9909 (both 1999) apparently obliterated the S and E extent of this installation. None of the surrounding loci from 1999 mention shells.

Importance: Medium value - portion of matrix sealing F18470. LB incl Mycenaean pottery.
