*unit:* --      *phase:* 9      *stage:* vi      *stratum:*      *PoM:*  
*summary:*

**Opened:** 4 large stones along a line with smaller stones below suggested architectural possibilities.

**Limits (N)** L18903

(S) L18903

(E) W9140

(W) L18903

**Closed:** floating

**Matrix:** 4 large stones (largest .28 x .18 x .1) in line roughly parallel to W9140, above concentrated small cobbles (.07 - .12 m long) in compact dark brown matrix with orangish patches.

**Relations:** L18916 appears to be the bottommost of the fill layers above L18915. This heap is the reason why subsequent fills sloped down from E to W in a humped configuration.

**Importance:** None.
