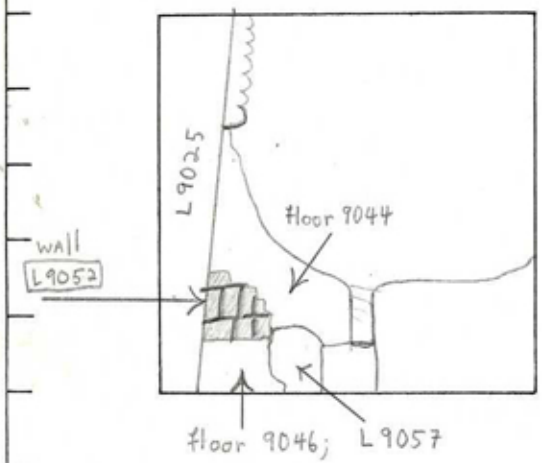
graphic description



final locus no.	arch. unit/ logical area	stage (in sq.)	final STRATUM
____			

OPENED: During clearing of rubble in L9045, W9052 was distinguished.

DEFINITION: To North and East by floor 9044, to south-east by rubble locus L9059, to south by floor 9046, to west by drain L9025. Consists of Kurkar blocks laid header stretcher style.

CLOSED: Removed wall L9052. [Technical close. L9052 becomes W9058. 18.07.91. DPW] see new card.

RELATION: Relation to drain 9025 unclear (doesn't touch) but it clearly any wall of which 9052 was part must have been cut by drain 9025. Reaches rubble fall of L9057. Partially overlies F9046 and ~~abuts~~ F9044. W9052 was seperated from W9025 by 1 thin (0.03-0.04 m) fill and small stones.

Is one of piers in proposed east-west running wall of which pier 9058 and 9068 also belong, the intervening rubble either having been robbed or possibly part of rubble locus [9045] and [9053].
