

TEL DOR 1988 field G square AK.3.3 phase (in area): LOCUS L9285

date opened 21/07/88 level 15.95 date closed 22/07/88 level 15.64 floor level type of locus Fill below paving stones

loci above L9237 loci below L9283 W9147 sealed by L9237?

graphic description

final locus no. arch. unit / logical area stage (in sq.) final STRATUM

Summary:

Description: [Opened]: Due to removal of paving stones of L9237.

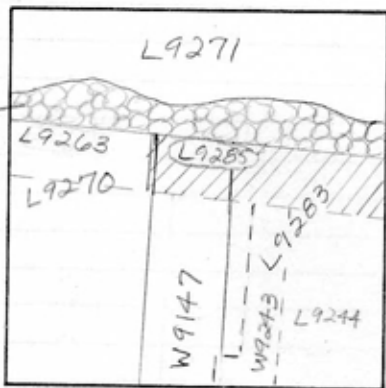

Matrix: packed, containing chunks of kurkar & stones. The composition is similar to that of L9283, L9263, & L9244.

Definition/Limits: [L9285] is composed of the material excavated from under the paving stones of [L9237] down to the level of [L9283], & is sealed by F9237

Reason for Closing: [L9285] was closed when excavated to closing level of [L9244] and material below [L9243]; all were seen to be identical and combined into [L9283].

Relation to Other Elements: [L9285] was bounded above by the paving stones of [L9237], which seem to seal [L9285], though this is uncertain. To the W, [L9285] reaches [L9263] (the material under the possible kurkar subfloor of [L9237]). [W9003] cuts [L9285]. To the S, [L9285] reaches [L9244]. Below the level of [L9285] are [L9283] & [W9147]. There is no direct relationship between [L9285] & [L9243]; however, since [L9285] is the same material as [L9244], & since [W9243] cuts [L9244] [L9285] must be earlier than [W9243].
