

TEL DOR 1988 field G square AJ33 phase (in area): Ca (v) LOCUS L.9.3.28
 date opened 05/08/88 level 1439 date closed 11/08/88 level 1422 floor level _____ type of locus Tumble From Wall
 loci above 9302 loci below 9346 sealed by _____

graphic description

final locus no. _____ arch. unit / logical area _____ stage (in sq.) _____ final STRATUM _____

Summary:

Description: Reason For Opening: W9140 divided L9302 into L9328 and L9321

Definition/Limits: Bounded on the west by the western bank and L9316, on the North by L9202, on the East by W9140 and L9251 and on the South by L9043, and possibly W9066.

Matrix: Mudbrick material with traces of fallen organic mat material and embedded field stones, bits of chalky material and some pot sherds.

Relationship to Other Elements: L9328 is cut by L9316 and L9251. L9328 reaches W9140 and is probably fall from this wall. L9202 is probably a continuation of

the same material, but was excavated in a previous season and in a different square. L9043 probably cuts L9328 but was also excavated in a different season and its relationship is hard to determine. L9328 is covered by L9302. L9328 covers L9346 L9328 may also reach/be cut by W9066, but this was also excavated in '86.

Summary:

Description: Reason for Opening: see card #1

Definition/Limits: see card #1

Matrix: same as '88 but much more fallen reed mat material in mudbrick material and few bones.

Reason for Closing: technical change made when shell layer of [L9346] was discovered in SE corner of [L9328] and the rest of [L9328] became [L9436].

section

Relationship to Other Elements: since the '88 season [L9328] has been found to cover [L9346] and [L9436], w/ [L9436] being of the same depositional material as [L9328]. [L9328]

partially reaches [W9066] in the area ^{that became} [L9436] but covers [W9066] in the area that became [L9346]. [L9251] cuts [L9328], as indicated in Card #1, but winter erosion revealed the relationship shown here of [L9328] reaching [W9140].
