Summary:

Description: Opened: To excavate material below Floor [L9157]
 Def/Lim: North By [L 9410], [W9065], [W9400] + Pit [L9168]. East By [W9140] and Pit [L9185], South By [L 9502] (and below), Pit [L9414]. West By Baulk.

Matrix: Alternating layers of Brown Sandy Soil, Ashy Soil & Charcoal Ash and Plaster Floors (Very Fragmentary). Few sherds.

Closed: when [L9380] was levelled to level of [L 9185] and materials were decided to be identical, an arbitrary ("technical") division split [L9380] into [L9493], [L9499] and [L9501].

Relations: cut by Pits [L 9168] and [L9185]. Reaches [W 9400], [L9502], [L9525]. Floor appeared to reach Stone Sockle of [W9400] though there was a gap between wall & floor (wash line).

Walls [9065] Flats on [L9380], as does [W 9140].
 Surfaces of same deposit as [L9380] continue in [L9502], [L9525], [L 9493], [L9501], [L9499] and [L9414] & [W9412] cuts [L9502/9525] surfaces. Sump wall [W9420] →*

[Note on Resurfacings: Due to the Fragmentary and interlocking nature of these sloping surfaces, several floors were not traceable, and the one traceable floor included within this locus was deemed a resurfacing, and did not facilitate a change of locus. →
