phase (in area):

LOCUS L9407

date opened 14/07/89 level 1417 date closed 11/09/88 level 1402 floor level _____ type of locus tumble from wall

loci above 9277 9202 loci below None yet sealed by _____

graphic description

final locus no. _____ arch. unit / logical area _____ stage (in sq.) _____ final STRATUM _____

Summary:

Description: Opened: when area North of [L9395] was determined to be of the same matrix as [L9277] (the bogus locus).

Definition/Limits: bounded by [L9548] to the North, [L9395] and [W9211] to the South, and [W9408] to the West

Matrix: mudbrick material with some reed matting material and few sherds.

Reason for Closing: not closed end of '89 season. Should be collapsed w/ material below Floor III of L9548 when excavated to the proper level.

Relationship to Other Elements: [L9407] reaches [W9408]

and [L9395], which is really a wall (the extension of [W9211]). Since this locus is full from a wall, it is later than [W9408] and [L9395]. [L9407] is the continuation of the material beneath L9548. [L9407] reaches [W9211] at an acute angle.
