graphic description

final locus no.	arch. unit / logical area	stage (in sq.)	final STRATUM

Summary:

Description: Opened To Bring L9411 to level of surrounding material, in order to determine limits of these lower loci.
 Def./lim.: North By W9140 and Pit L9185. East By W9420. South By Pedestal L9000. West By Pit L9378/L9139 and W9413
 Matrix Alternating Levels of gray ash and reddish soil, over layer a thicker reddish soil layer - few inclusions.
 Closed when soil below L9378 and L9411 were judged identical, and these were collapsed into L9434.

Relations: L9411 seems to be the south eastern most extension of sloping surfaces L9380. A small fragment of surface L9380 was also detected within L9411. L9411 is cut by Pit L9378/L9139, W9412, W9413 and W9420. L9411 apparently is also cut by W9140, though it slopes

up toward it, as though they were related. Part of L9411 was collapsed into L9434 while part was collapsed into L9411.
