Unit	Phase	Stage	Stratum	PoM
------	-------	-------	---------	-----

Summary

Opened: At the beginning of the '91 season in order to remove 2 years of wash and to find the boundaries of the previous loci (L9512, L9516) in this area.

Limits (N) Bounded on the North by L9511.

(S) Bounded on the South by the southern edge of AK33.

(E) Bounded on the East by the eastern edge of AK33.

(W) Bounded on the West by unexcavated material beneath W9147 (continuation of L9516).

Closed: Removed wash and dry, homogeneous material to level of nonhomogeneous material below closing level of previous loci in this area (L9512, L9516).

Matrix: Variable wash: loose, dry grey soil with many shreds and fallen stones.

Relations: L9603 is covered by L9512 and L9516 ('89 season) and covers the SW portion of L9655 and all of L9668 and L9669. L9603 reaches pit L9633, L9511, L9644, L9645, L9662, and L9663. Since L9603 is a cleaning locus which was created by 2 years of wash and erosion, it is non-stratified and has no relationship to previously excavated loci in adjacent squares or loci in AK33 excavated in '91 or earlier seasons.

Additional Observations/Value: Cleaning locus covering fallen mudbrick material with fallen field stones and a possible pit. Of no stratigraphic value.
