Summary

Opened: OPENED AS A DISTURBED LOCUS BETWEEN 4 WALLS; 9278, 9279, 9274 and 9096.

Limits (N) BOUNDED BY WALL 19278 & 19706
 (S) BOUNDED BY 19096
 (E) BOUNDED BY 19279
 (W) BOUNDED BY 19274 & 19711

Closed: CAME DOWN ON FLOOR 19305 - COLLAPSED INTO 19630 ALONG WITH 19706, 19710 & 19711 when floor was penetrated.

Matrix: MATRIX IS A VERY HOMOGENEOUS MED BROWN SEMI-COMPACT CLAYEY LOAM. NO SOIL CHANGES THROUGHOUT LOCUS TO WHITE ASHY SOFT FRAGMENTARY FLOOR. MATRIX OF 19706, 19710, AND 19711 ARE ALL CONSISTANT WITH 19611 - POSSIBLY ALL ONE DEPOSIT.

Relations: STOPPED EXCAVATING WHEN 19278, 19279 & 19274 BEGAN TO FLOAT. 19706 IS A SEALED LOCUS UNDER 19278 and 19279 - PROBABLY CONTEMPORARY WITH 19611 IN PART, BUT DIVIDED FROM SEALED VS. UNSEALED. 19711 IS A SEALED LOCUS UNDER 19274 TO THE WEST AND IS ALSO POSSIBLY CONTEMPORARY WITH 19611 IN PART, BUT DIVIDED FROM SEALED VS. UNSEALED. 19096 CUTS 19611 TO THE SOUTH & 19611 POSSIBLY CUTS 19274. 9278 and 9279 may cut 9611, or if 9611 is a robber trench 9611 reaches, but does not cut, the S. face of 9278 and 9279. 19611 CONTINUES THROUGH LOCI 19706, 19710, AND 19711 - MATRIX IS CONSISTANT THROUGHOUT.

Note: 9611 is an enigma. Its matrix is similar to that of the loci below walls which are at the same elevation as 9611, suggesting that these walls cut a deposit continuous with 9611 to N, E and W, leaving 9611 intact. 9096 also cuts 9611 on the S, further isolating 9611. What is curious is that 9611 separates 9274 from 9279/9278. Why doesn't 9274 continue E? Does 9274 turn a corner S, under 9096, or is 9611 really a fragment of a robber trench cutting 9274? we can't decide at this point. **
 * partially robbed but to E = W9288 (check alignment + elevation)
 ** probably pt RE and below the wall in fill

Additional Observations/Value: LIMITED VALUE BECAUSE OF SIZE OF EXCAVATED AREA AND IS DORRED OUT. SEE '88 SEASON FOR 192411 CARD.
