Unit	Phase	Stage	Stratum	PoM
------	-------	-------	---------	-----

**Summary**

**Opened:** Reached 1989 season elevations, and came down onto six distinctly different areas of material; opened [L9622], [L9623], [L9624], [L9625], [W9626], & [L9625]

**Limits (N)** Bounded by [W9626]

(S) Bounded by [L9624]

(E) Bounded by [L9622]

(W) Bounded by [L9551]

**Closed:** Came down onto floor [F9623] in [L9623], [L9624], & [L9625]

**Matrix:** Mudbrick debris, material, crumbly grey soil, a few cobblestones, some pottery and bones

**Relations:** [L9600] covers, but does not seal, [L9625]. To the N, [L9625] reaches [W9626]. To the S, the relation between [L9625] & [L9624] is not clear. The material from [L9625] may have fallen from [W9626]. The floor beneath [L9625] is lower than that of [L9624]. Perhaps the material of [L9624] reaches that of [L9625]. To the E, pit [L9622] cuts [L9625]. To the W, the material of [L9625] may be identical to that of [L9551]. [L9551] is described as a fill, consisting of cobble stones and a hard whitish-grey soil. Although material of [L9623], [L9624] & [L9625] is different for each locus, the same floor [F9623] underlies each one of them. [F9623] covers and seals [L9661]. [F9623] within [L9625] reaches [W9626]. The fill of [L9625] also reaches [W9626].

In the N part of A131, there is a fragmentary floor, F9606/9063?, at about the same level as [F9623].

**Additional Observations/Value:** Because [L9625] lies below a "cleaning" locus, it may be disturbed.
