Summary

Opened: 9637, a clearing locus, was brought to level of 9674 and collapsed into 9687 to open greater area.

- Limits (N) Bounded by rubble fall below W9675, W9702 and fill below L9637
 (S) Bounded by W9278 and fill below
 (E) Bounded by W9266
 (W) Bounded by W9684

Closed: When reached fragmentary floor 9687 and changed to L9693

Matrix: Compact, dark brown mud-brick debris with turtar mixed in. Floor was a by beaten earth. L9687 is similar to L9666, L9665, L9692, L9694, L9648 and L9639. Large quantity of "half-head" sized and larger cobbles. Some fist sized cobbles.

Relations: L9674 and L9637 cover L9687. L9687 covers L9693. L9687 reaches iron-age walls W9266 and W9684. L9687 is cut by wall W9278 and W9702. L9687 is probably a continuation of apparent rubble fall beneath L9675. This fall appears to rest on the level of floor 9687. L9687 is a continuation of mud-brick debris fill beneath L9637. The relationship between W9702 and the rubble (fill below with L9687) is still unclear.

Additional Observations/Value: A mud-brick and rubble fill to fragmentary floor and a pure 10th century B.C. deposit.
