------	-------	-------	---------	-----

Summary

Opened: In excavating [L9640] and [L9690], came down on [F9690]; opened [L9713] below [F9690] and [L9713] as unsealed material to W of [F9690]

Limits (N) Bounded by [W9728]

(S) Bounded by [W9626]

(E) Bounded by [L9712]

(W) Bordered by material below [L9530]

Closed: Came down on stone socle of mudbrick wall [W9728]

Matrix: Fist-sized cobbles on surfaces, becoming double-fist to head-sized below, in mudbrick debris, and little pottery

Relations: [L9640] covers, but does not seal, [L9713]. [L9713] covers and seals the as-of-yet unassigned locus below (end of season) *To the N, [L9713] reaches [W9728]. To the S, [L9713] reaches [W9626]. To the E, the relation between the fill of [L9713] and [L9712] is uncertain, but the fills may be identical. [L9713] floats above [F9712]. To the W, the relation between [L9713] and [L9530] is uncertain. [L9530] was excavated in 1989 to an elevation of 14.23, and had not been fully excavated by the end of that season. The material of [L9530] is described as mudbrick debris. This debris could have been in part from the collapse of a mudbrick wall (maybe [W9728]?). The heavy erosion since 1989 could account for the difference of ca. 10 cm between the elevations of [L9713] and [L9530]. * [L9713] also lies partly above [L9730], but does not seal it.

Additional Observations/Value: The material at the W end of [L9713] may be disturbed due to erosion; therefore of medium value at best.
