Unit	Phase	Stage	Stratum	PoM
------	-------	-------	---------	-----

Summary

Opened: To excavate area below where W9278 dovetails with W9051.

Limits (N) L9667 and L9694  
 (S) L9716, L9692 and L9723  
 (E) W9684  
 (W) L9648 and L9694

Closed: When brought to level with L9716 and L9723, collapsed into L9731.

Matrix: Hard, compact mud-brick debris. Similar to L9694 to the N, L9648 to the W, L9692 to the S, and L9708 to the E.

Relations: W9728 and W9051 cover, cut, and seal L9726. L9726 covers N. half of L9631. L9726 reaches W9684. L9726 continues to the N. as L9694, to the W. as L9694 and L9648, and to the S. as L9692. L9716 (the FT for W9051) cuts S. edge of L9726. L9723, probably a continuation of the fill in L9716, probably also cuts L9726. L9667 to the N. reaches L9726. On the E. side of W9684, L9726 continues in the fill below W9278 as L9708. 9667 reaches 9726 because 9667 covers 9694 which is apparently the same deposit as 9726.

Additional Observations/Value: Sealed lows below W9278/W9051 dovetail. Small area, may possibly grouped with others around it. Medium Value
