Unit	Phase	Stage	Stratum	PoM

Summary

Opened: L9723 came down on W9729 and F9723. L9716 was brought to level with L9723. L9723 and L9716 were collapsed and divided into L9731 and L9732.

Limits (N) W9729

(S) Unexcavated area below L9716.

(E) Fill below W9096 and L9095

(W) L9694.

Closed: End of season - Not closed

Matrix: Compact, brown grey mud-brick debris. Lighter brown than other mud-brick loci in square. F9723 was an ash, beaten earth floor.

Relations: L9723 and L9716 cover and probably cut L9732.

L9716 is the FT of L9051 and L9723 is probably a continuation of this fill. L9732 reaches W9729. L9732 appears to

continue into fill below W9096, L9095 and L9716.

L9723 continues to the W. in L9694. F9723 seals the E. half of L9732. F9723 is probably a N. continuation of F9656 in A132.

Additional Observations/Value: Mud-brick locus reaching W9729. Small exposure; W. edge probably disturbed. Value uncertain.
