Unit \_\_\_\_\_ Phase \_\_\_\_\_ Stage \_\_\_\_\_ Stratum \_\_\_\_\_ PoM \_\_\_\_\_

Summary \_\_\_\_\_

Opened: L9857 was divided into L9879 N of W9887 and L9878 S. of this wall.

Limits (N) W9857  
(S) W9704  
(E) W9728  
(W) L9300

Closed: Came down on floor L9878 in a single pick pass.

Matrix: Dense, ashly compact mudbrick debris mixed with large quantities of pottery and bone (especially fish bone). Floor is fragmentary and only survives in areas on ashly and underlying surface similar to F9857 above but not to F9879 to the N. covered by other floors.

Relations: L9857 above covers but does not seal L9878.

L9878 reaches W9704 to the S, and is cut by W9728 to the E. (It may actually continue below W9704 or reach an as yet uncovered face below W9626)

To the W, L9878 is presumably cut by L9300

To the N, L9878 appears to reach W9887, though this is unclear due to the poor preservation of both floor and wall.

L9879 covers but does not seal L9300.

L9878 reaches the mudbrick wall W9704, and may either be cut by or reach W9728. F9878 probably never reached L9300 and may well have been cut by it. F9878 probably reached W9887, though this relationship remains uncertain.

This floor is no doubt another earlier surface of floors F9857 and F9824

[\* note FL9878, FL9879, FL9261 are apparently the same. @.]

Additional photos: 101452 to 101458

Additional Observations/Value: Unsealed fragmentary floor re-surfacing; low value.
