Summary

Opened: Difference of material in 1998. North part more greyish and looser material than red-brown in South

Limits (N) Bank
 (S) L 9924 and L 9935 (below L 9924)
 (E) L 9931
 (W) material under W 9147

Closed: End of the season - not closed

Matrix: Greyish loose material with pottery and bone. L 9924 and L 9935 are red-brown material and compact. L 9931 very much the same material as L 9925.

Relations: L 9917 covers but does not seal L 9925
to the N L 9925 appears to continue into the bank
to the W L 9925 appears to continue into the material under L 9918
to the E L 9925 appears to continue into L 9931 because of the very similar matrix
To the S loci L 9924 and L 9935 might reach L 9925. While digging down the grey material spread more to the south which might be an indication for the fact that loci L 9924 and L 9925 slide under L 9925. But this relation is uncertain.
The pottery in both loci is more or less from the same period (mostly I, II, III).

Note: On the SE part of L 9925 we uncovered ^{white grey} material lined by 2 white lines ± 60 cm long and 35 cm apart. We couldn't find what it was and it was too small to give a separate locus number. In the section we could see that the lines would only go down about 15 cm level + 13.35

Additional Observations/Value: fill material without any specific value
