Summary

Opened: under fragmentary floor [L 9884]

Limits (N) Baulk

(S) [L 9958]

(E) Unexcavated material below [L 9987]

(W) [L 9925]

Closed: End of the season

Matrix: Greenish material, not many pottery sherds. Different from [L 9884] where there was a lot of mudbrick material. [L 9925] is more or less the same material. In locus [L 9958] we have light brown material on top but lower we have a sloping ash layer *

Relations: [L 9884] covers, but does not seal [L 9931]

To the N [L 9931] appears to continue into the baulk

To the S [L 9931] might reach the sloping ash layer in [L 9958]

This same ash appeared in the eastern section of [L 9931] (unexcavated part below [L 9987]) as well as on the bottom of [L 9931] against southern limit.

To the W [L 9931] might continue into [L 9925], since the matrix is very similar.

The relation to the E is not clear yet since material under [L 9987] hasn't been excavated yet

The ash layer (ca. 2-3 cm thick) slopes down considerably from E-W. It appeared mainly at the base of [L 9931] but near the top of 9987.

* Matrix: [L 9884] fragments of floor, very thin and white (kerker/lime?)

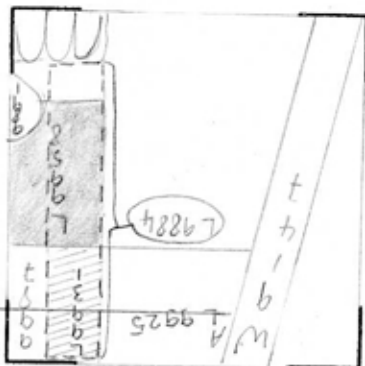

Additional Observations/Value: No specific value, fill under fragmentary floor
