**Summary**

**Opened:** Excavation in L9947 and L9900 came down on F9947. [L9967] opened to excavate unsealed part of L9947

**Limits (N)** W9909 and [L9908]

**(S)** bank

**(E)** W9140

**(W)** L9900

**Closed:** at end of season - Not closed.

**Matrix:** (Continuation of L9947). Mottled orange, brown, gray and black matrix of SE corner phases out with further excavation. Matrix consists of medium-brown sandy soil with very few sherds, shell, and bone; mud brick material.

**Relations:** [L9967] is covered, but not sealed by L9947. [L9967] covers, but does <sup>not</sup> seal an unexcavated locus below [L9967], L9947 and the material below [L9967] seem to be one continuous deposit.

To the N: [L9967] probably reaches W9909. No floor reaching W9909 was found in L9947 above or in [L9967], suggesting that W9909 is here superstructures.

To the E: [L9967] continues below L9947 below W9140.

To the S: [L9967] continues into the S bank.

To the W: [L9967] may continue below F9947, but this is uncertain until F9947 and the fill below are excavated. [L9967] may continue into the S part of L9908 but further excavation in the area of L9908 is necessary to test this out.

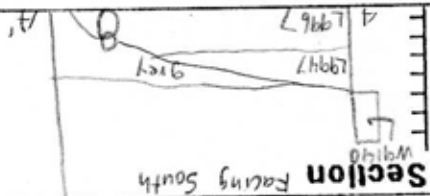

**Note:** L9947 (above L9967) and L9967 contain a light grey lens of material sloping down from E-W. This was not noticed during excavation, but only in section. It may be leveling material for F9900 above.

**Additional Observations/Value:** Not sealed; not obviously disturbed; no goodies; rather boring.
