Summary

Opened: Came down on wall while excavating L 9906

Limits (N) F9987
 (S) L9951
 (E) A932 (L9380?)
 (W) L9987

Closed: Went below wall, came down on ash layer, collapsed with similar material below F9958 + F9987 into L9995

Matrix: Head size rocks, L9987 sandy brown material coming down on black ash spreading under [W9992] as well. L9958 also brown sandy material with small stones, also coming down on black ash. To the E end of L9958 and 9987 very thin white floor fragments, + reentrancies. L9380 brown sandy material, ash fragments

Relations: L9987 covers but does not seal [W9992] [W9992] covers but does not seal L9995
 To the N relation uncertain [W9992] doesn't seem to continue into the bank. In fact the highest surface of F9987 reaches [W9992] on the N.
 To the S L9958 may reach [W9992] F9958 reaches [W9992]
 To the W the fill material of L9987 probably reaches [W9992]. The F9987 continues under [W9992] (was visible in section of western bank of square A932)*.
 Might be floors described in L9380, where multiple reentrancies of floors were found, elevation between 13.60 and 13.51. Might also be F9995 on western limit of A932 / A933 (elev. 13.76 - 13.65)
 Except for this, relation of [W9992] to E uncertain. Same brown sandy soil and ash layer in L9380 probably reached [W9992]
 * The highest of 3 surfaces of F9987 reaches [W9992], and the lowest surfaces runs underneath [W9992]

Additional picture's 102 084 - 102 087

Additional Observations/Value: Small fragment of wall (3 stones) without any clear connection to other architectural features

Opening el. Check with
Gila
